

How might we help students at MIT?

Creating value for students and for school

How can we create added value?

We have to define students' needs and pain points

Students' needs

Students might not be able to take notes for every lecture for many reasons

Lesson plans and PDFs on the Fronter don't give you enough information

This lack becomes especially bad when you have to study for an exam

Our mission

to help students providing them notes and information
about every lecture

making a collaborative notebook in which everyone
can share their material

ClassCrowd

an online collaborative notebook for you and your class

Student outcome

Easy comparison and shared knowledge,
for a richer and more complete learning experience

Reduced differences of knowledge between students

School outcome

Higher number of students can pass the exams with
better grades thanks to our app

Which features will create the desired outcomes?

Must have

Login system for students

Students can upload information about every lecture:

- Bullet points
- Code
- Plain text
- Pictures

Nice to have

Admin account

Being able to see info from other classes

How it's made

CSS

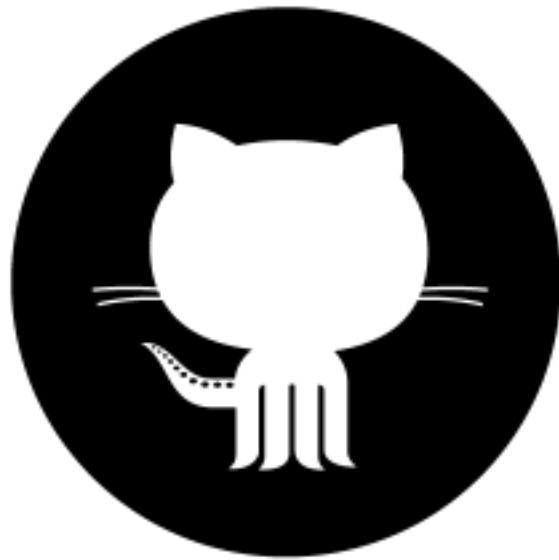

HTML

JS

Open-source
